Parameter List

Control, customize, and enhance your images with parameters!

What are Parameters?

Parameters are like special instructions you can use to guide how your images turn out. They help you customize things, like changing the shape of an image, or using a [Personalization profile](#).

Using Parameters

Parameters always go at the end of your text prompt, after you've described what you want to see. Using them successfully is all about placement and formatting.

vibrant  California  poppies  --ar  16:9 

Remember these tips for success:

- 1 **Place Parameters at the End:** Always put parameters after your prompt text.
- 2 **Watch the Spaces:** Add a space between your prompt text and the dashes.
- 3 **No Punctuation:** Don't use commas, periods, or other punctuation marks in your parameters.

Ask AI

Common Mistakes to Avoid:

- 💬 vibrant California poppies--ar 2:3 **(No space before the dashes)**
- 💬 vibrant California poppies - - ar 2:3 **(Extra space between the dashes)**
- 💬 vibrant California poppies --ar 2:3, **(Using punctuation in parameters)**
- 💬 vibrant California --ar 2:3 poppies **(Prompt text after parameters)**

Full Parameter List

Aspect Ratio

Midjourney images start as squares, but you can change this using the aspect ratio parameter
--aspect or --ar

Chaos

Spice up your image results with the chaos parameter
--chaos or --c

Omni Reference

Want to use a person's likeness or the form of an object? You can provide Midjourney with an Omni Reference! (replaces **Character Reference** in V7)
--oref

No

Tell Midjourney what you don't want in your image using the no parameter
--no

Personalization

Create custom image styles with personalized profiles and moodboards
--profile or --p

Quality

Control the detail and processing time of your images with the quality parameter
--quality or --q

Repeat

Want to generate multiple image sets from a single prompt? Use the repeat parameter
--repeat or --r

Seed

Use the seed parameter for testing and experimenting
--seed

Stealth Mode

Make your creations private on the Midjourney website
--stealth

Raw Mode

Gain more control over your images with Raw Mode
--raw

Stylize

Control the artistic flair in your images with the stylize parameter
--stylize or --s

Style Reference

Want to match the look and feel of another image? You can provide Midjourney with a Style Reference!
--sref

Tile

Create seamless repeating patterns with the tile parameter
--tile

Version

Explore and switch between Midjourney's model versions using the version parameter
--version or --v

Draft

Generate draft images in V7 at half the GPU cost using --draft

Weird

Make your images quirky and unconventional with the weird parameter
--weird or --w

Fast Mode

Switch your GPU speed to Fast Mode
--fast

Image Weight

Control the impact of image prompts
--iw

Relax Mode

Switch your GPU speed to Relax Mode
--relax

Turbo Mode

Switch your GPU speed to Turbo Mode
--turbo

Niji

Use our model focused on anime and Eastern aesthetics
--niji

Public Mode

Make your creations public on the Midjourney website
--public

Motion Low/High

Motion settings for video generations --motion low and --motion high

Video Looping & End Frames

Create looping video generations with --loop and set a custom end frame using --end

Batch Size

Control the number of videos generated from each video prompt using --bs

Style Weight

Control the strength of your Style References with --sw

Style Reference Versions

Select your style reference version using --sv

Video

Generate videos in Discord using --video
