

STORY WEBSITE DESIGN & MINI PROJECT

Week 5, Lab 6

INDEX

- Assignment 4
- Mini-project

ASSIGNMENT4 – STORY WEBSITE DESIGN

- Applying LLMs to design a story.
- Generate Images according to your story.
- Design a website using StreamLit to show your story.

ASSIGNMENT4 – STORY WEBSITE DESIGN

- What to submit (Due on March 26, W8, Thursday)
 - Worksheet in PDF – including all the intermediate design process
 - Your final story design – the final story and corresponding images. (pack them into a readable PDF)
 - A website to show your story (ipynb file).
- Presentation & Peer Voting (March 27, Friday)
- Present your story website.

ASSIGNMENT 4 – STORY WEBSITE DESIGN

- Grading Criteria (10 Points)
 - Analysis of the HKUST Sustainable and Smart Campus Website (1 pt)
 - LLM story generation (1 pt) Image Generation (1 pt)
 - Website Technical (2 pts)
Show the depth of your understanding on using StreamLit for UI design
 - Aesthetics of the Website(2 pts)
Visual quality of your final website
- Peer Voting (3 pts)
 - Voting : 1 pt – If you submit your votes on time.
 - Rules: You have exactly 3 votes. You cannot vote for your own work.
 - Scoring: * Rank 1-4: 2 pts
Rank 5-8: 1 pt
Rank 9-11: 0 pts

**MINI PROJECT –
DESIGNING A PERSONALITY-DRIVEN
VIRTUAL CHARACTER**

Yuan Liu

A PERSONALITY-DRIVEN VIRTUAL CHARACTER

- Interactive Visual Personas
- Your goal is to define a distinct identity for a virtual character and bring it to life in a chat interface. This project focuses strictly on prompt engineering for personality and visual consistency, as well as basic system integration.

A PERSONALITY-DRIVEN VIRTUAL CHARACTER

- **Core Requirements:**
 - **Distinct Personality (LLM):** You will use system prompts to rigorously define your character's personality, tone, and background. The character's text responses should be highly recognizable and consistent.
 - **Visual Identity & States:** Design the character's visual identity. You must generate a set of suitable images that clearly showcase the character's unique traits and perhaps different emotional states or reactions.
 - **Image Triggering Mechanism:** Design an interaction mechanism where the chatbot can "reply" with the appropriate images you generated alongside its text.
 - **The Interface:** The character will live in a chatbox built using StreamLit, with the backend interacting with an LLM of your choice.

A PERSONALITY-DRIVEN VIRTUAL CHARACTER

- Please submit the following by the deadline:
- **Codebase:** A Python Notebook containing your StreamLit webpage codes.
- **Design Report:** A document detailing:

Your final LLM system prompts used to define the character.

Your image generation prompts and image generation tools.

A brief explanation of your design choices (why you chose this personality, how the visuals reflect it, and how your image-triggering mechanism works).

A PERSONALITY-DRIVEN VIRTUAL CHARACTER

- In-Class Presentations – April 10
- We will dedicate our class on **April 10** to presentations. You will be expected to:
- Explain the design process and prompt engineering behind your character.
- Show a live demo of your StreamLit application interacting with the class.
