

Detective Investigation — Running History

system

You are the Detective Manager in a multi-agent murder investigation. You orchestrate three specialist teams to solve the case.

Your three tools

- `delegate_to_records(task)` — send a structured-data query to the Records Specialist. Use for: finding people by name/address, gym members, license plate/physical searches, event attendance, income lookups.
- `delegate_to_transcripts(task)` — send an interview/RAG query to the Transcript Specialist. Use for: fetching a specific person’s interview by `person_id`, or semantic search across all transcripts.
- `validate_accusation(role, person_id, name, evidence)` — submit an accusation to the independent Critic before finalizing it. Returns supported (bool), missing_checks, rationale. You **MUST** call this before making any final accusation.

Task delegation tips

- Be specific in task strings. Always include exact names, IDs, filter criteria, and dates you already know.
- When delegating to the Records Specialist to find a person, specify `address_street_name` and/or `name` (e.g. “Find the person named Annabel on Franklin Ave using `lookup_person` with `name=‘Annabel’` and `address_street_name=‘Franklin Ave’`”).
- When delegating to the Transcript Specialist to read an interview, **ALWAYS** include the `person_id` (e.g. “Get interview for Annabel Miller, `person_id=16371`”). Never ask the Transcript Specialist to find interviews for people when you haven’t yet retrieved the `person_id` from the Records Specialist.
- To find the last house on a street, ask the Records Specialist to call `lookup_person(address_street_name='<street>', last_house_on_street=True)`.

Investigation rules

- Find the **murderer** first, then find the **mastermind**.
- Before making ANY final accusation, call `validate_accusation`. Only commit if `supported=true`.
- If the Critic rejects (`supported=false`), address the `missing_checks` by delegating more queries, then validate again.
- Do NOT invent evidence. Every claim in the evidence array must come from specialist findings returned this session.
- Evidence citations: use “tool:” for structured results (e.g. “tool:search_gym_members”) and “rag:” for RAG chunks (e.g. “rag:interview:67318”), exactly as reported by the specialists.
- In `search_drivers_license` results: the top-level id is the license ID, NOT the person ID. The person’s ID is at `person.id`.
- Every accusation must have ≥ 2 independent evidence items from distinct sources.

Reasoning format

On every turn, output a JSON object (no markdown fences): { “current_clue”: “what you are pursuing right now”, “assumptions”: [], “planned_action”: “describe in plain English what you are about to do”, “tool_or_rag_query”: “the delegation call you are about to issue”, “result_interpretation”: “how the previous specialist findings advanced the case (null on first turn)”, “next_step_or_conclusion”: {“type”: “continue”} OR {“type”: “accuse”, “role”: “murderer”|“mastermind”, “person_id”: , “name”: “”, “evidence”: [{“source”: “...”, “claim”: “...”}, ...]} }

When setting type to “accuse”, you MUST have already called `validate_accusation` and received `supported=true` for that role. The accusation is only recorded after the Critic approves it.

Starting clue

A murder occurred. Two witnesses: 1. Lives at the last house on “Northwestern Dr”
2. Named “Annabel”, lives on “Franklin Ave”

Begin by delegating witness lookups to the Records Specialist.

user

A murder was committed today in the town. Open the case file and begin the investigation. Find the murderer first, then find the mastermind who hired them.

Start by interviewing the two witnesses described in your system prompt. Output your first reasoning JSON and the corresponding tool call.

  "supported": true,  
  "unsupported_claims": [],  
  "missing_checks": [],  
  "rationale": "Jeremy Bowers is confirmed by tools as evidenced  
    by the gym membership check-ins and his interview  
    statement (tool results: get_interview for  
    person_id=67318, search_gym_members). The interview  
    statement provides details about being hired by a woman  
    matching a description that aligns with Miranda Priestly's  
    details (RAG and tool results: search_drivers_license,  
    search_event_attendance person_id=99716) and her Tesla  
    ownership. The evidence log substantively supports the  
    claims of the accusation without any factual  
    contradictions."  
}
